

REBUILD IT WITH THE PARTS THAT BUILT IT

As a brand of Freudenberg-NOK, the world's largest producer of OE sealing products, TransTec® kits feature more of the same transmission components that are supplied to Original Equipment Manufacturers globally than any other aftermarket brand. Driven by our brand promise – OE First – we rely on a proven three-pronged approach to provide installers with the highest quality kit contents available.

- 1) Our first objective is to provide the original equipment components when we can make them available to the aftermarket.
- 2) When the original components are not available we develop and manufacture a comparable OE product within the Freudenberg and NOK families, utilizing over 50 OE manufacturing facilities globally.
- 3) Our remaining kit content is developed with a global network of manufacturers, outside of the Freudenberg-NOK network, that have been rigorously evaluated to pass Freudenberg-NOK's OE supplier standards for manufacturing competency and quality.

TransTec® overhaul kits contain, on average, 60% OE content from Freudenberg and its family of companies whereas competitor kits contain only 5-10% OE content (on average). Our approach to providing the industry with the highest level of OE and quality manufactured product is supported by Freudenberg-NOK's proven quality systems, engineering methods and component validation testing.

TransTec® brand automatic transmission overhaul kits are available from a number of distributors globally, including Transtar Industries. Rebuild it with the parts that built it, insist on Genuine TransTec®.
